Piecework and Salary Assignment

Read the following scenarios and calculate how much money they will be paid. Make sure you show all your work in order to receive full marks.

Piecework Questions

1. Joe picks 40 boxes of berries. He gets $.50 for each box.

2. Sheila styles 8 ladies hair at the hospital. She gets $10.00 for each styling.

3. Mandeep gets $.29 for every shirt that he packs and $.31 for every dress that he packs. How much will he earn if he packs 200 shirts and 150 dresses?

NOTE - In some cases a worker is paid a premium if they do more work than the standard.

4. a) Donna is expected to sew 100 pair of jeans at $.89 each a day. She will get $.99 for each pair she sews over 100. How much will Donna make if she sews 130 pairs of jeans in 1 day.

   b) How much will Donna make if she sews 125 pairs of jeans on Friday?
Salary Questions

REVIEW - Salary:

A person gets paid on a yearly amount agreed upon by the employee and the employer.

The person will be paid according to a schedule that could be weekly (52 times a year), every two weeks (26 times a year), twice a month (24 times a year) or monthly (12 times a year).

To calculate how much the person would earn each pay just divide his/her yearly salary by how many times a year he/she gets paid.

To calculate what someone will make as a yearly salary if he/she is paid by another method multiply his/her pay by how many times he/she gets paid a year.

1. Anne makes $35000 a year, calculate the following:
   a) Her pay if she is paid weekly.
   b) Her pay if Anne is paid monthly.
   c) Her pay if she’s paid every two weeks.

2. a) Jorge makes $400 each week. What is his yearly salary?
   b) If he got $867 twice a month, what would his salary be?
